

# Maintain, Repair & Overhaul Services

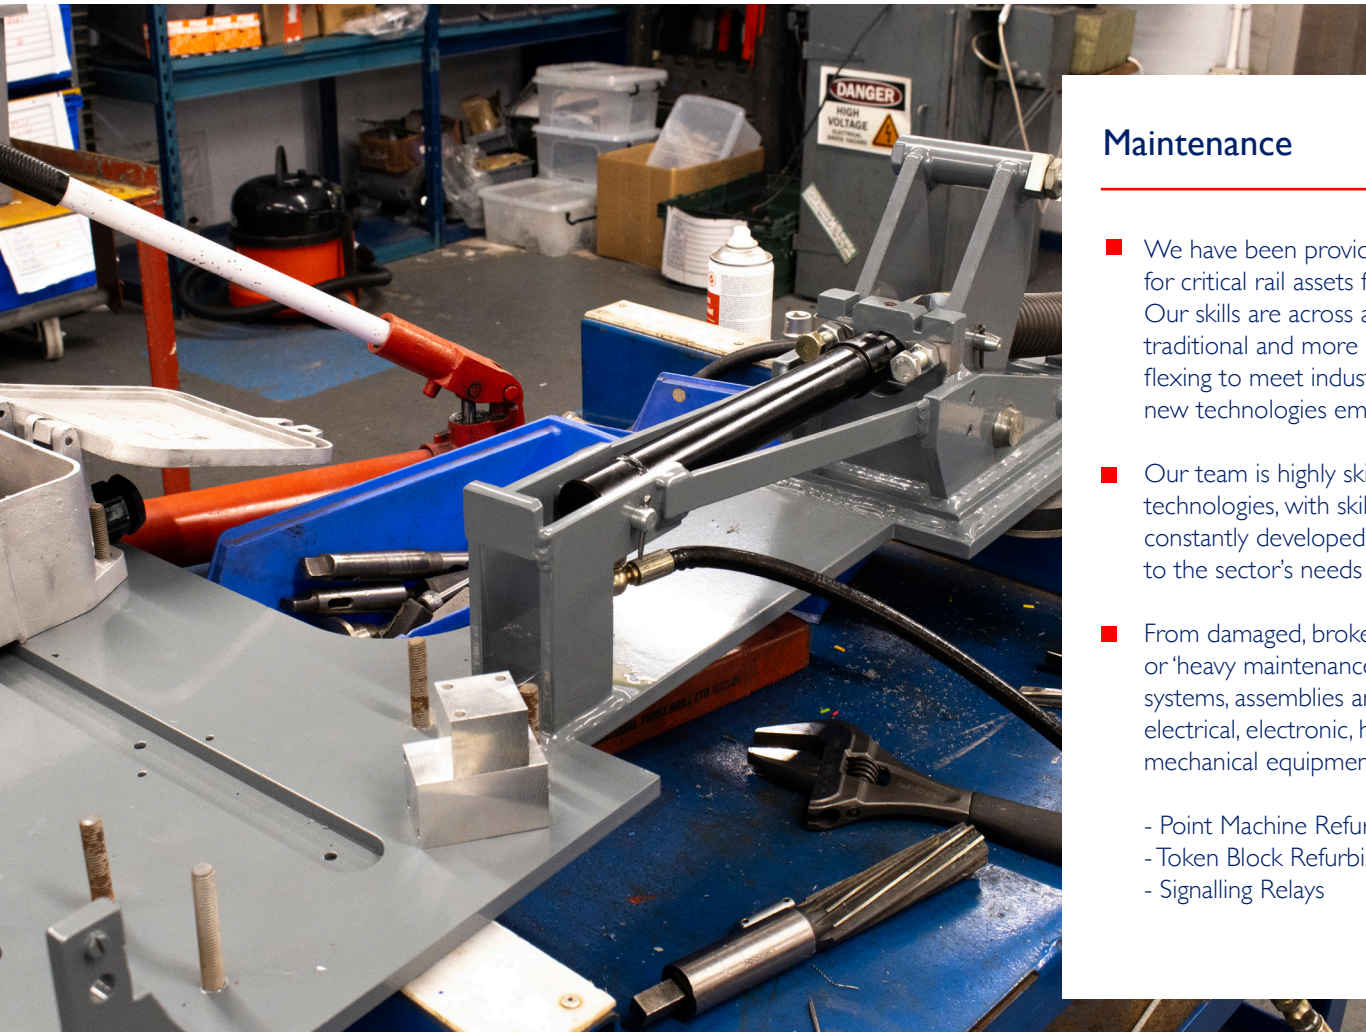

---

**UNIPART**  
**RAIL**

# Our MRO solution delivers an improved product lifecycle for a more sustainable approach to asset management, delivering a full suite of services to suit your requirements

We also design-in any specification/configuration upgrades to suit your emerging needs. We will assess any asset and develop an overhaul specification that meets standards. Equipment serviced, repaired, refurbished and overhauled as new, delivered with full warranty and industry compliance.

Many assets which are currently scrapped require work to keep them operational. Often, these can be economically overhauled for less than the price of new, delivered with warranties that meet or exceed those available from newly procured alternatives.

## Maintenance

- We have been providing MRO for critical rail assets for decades. Our skills are across a range of traditional and more modern assets, flexing to meet industry demand as new technologies emerge
- Our team is highly skilled in rail technologies, with skills being constantly developed to respond to the sector's needs
- From damaged, broken, life-expired or 'heavy maintenance stage' systems, assemblies and parts, to electrical, electronic, hydraulic and mechanical equipment, including:
  - Point Machine Refurbishment
  - Token Block Refurbishment
  - Signalling Relays

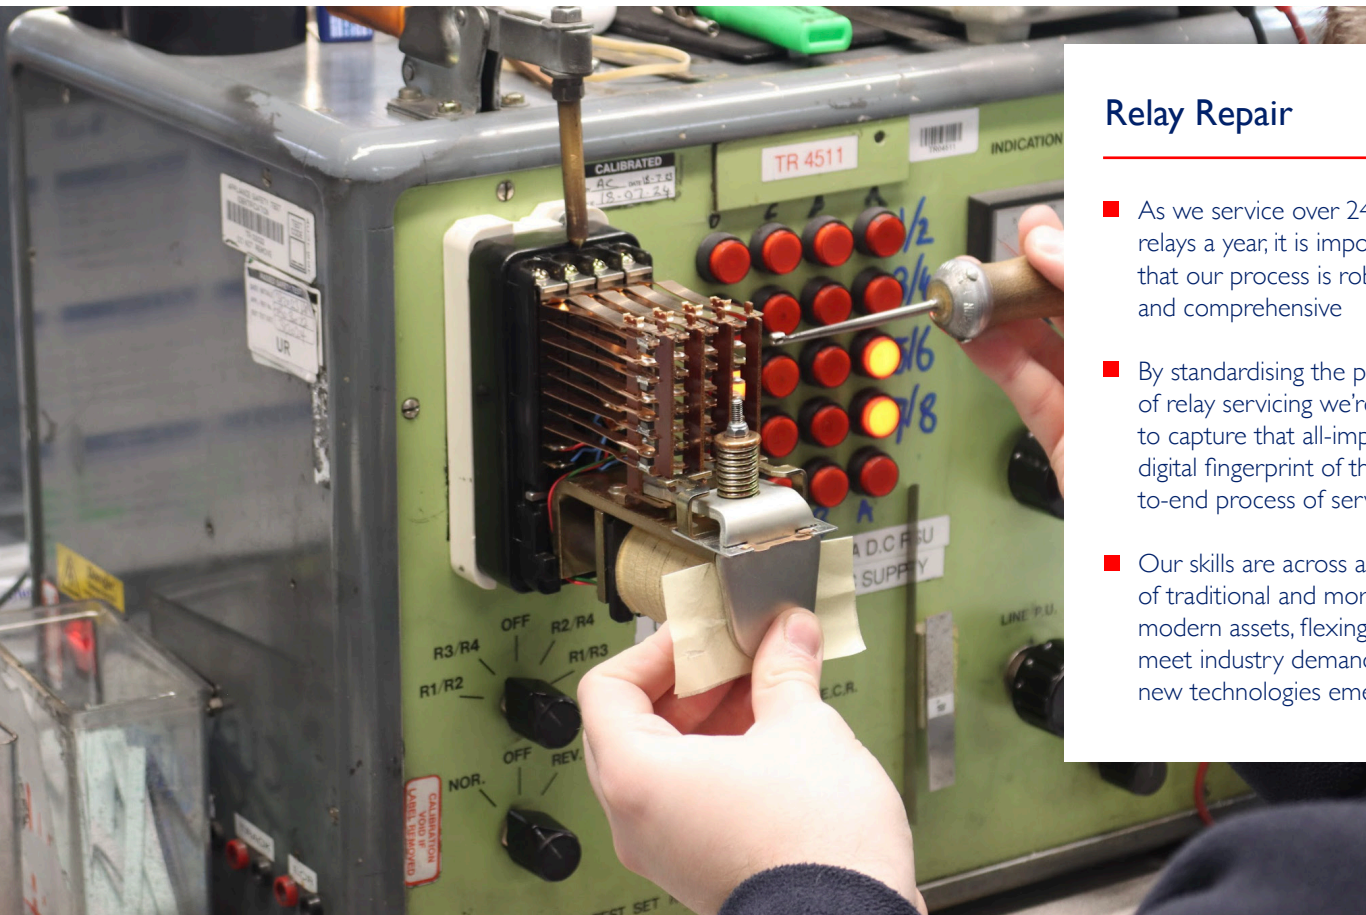

## Extending Asset Life

- By avoiding scrapping material and maintaining rather than replacing assets, your scope 3 emissions are reduced, helping with your net zero journey
- By extending asset life, you are ensuring you are supporting your use of the circular economy
- We have been providing MRO for critical rail assets for decades
- Our team is highly skilled in rail technologies, with skills being constantly developed to respond to the sector's needs

## Relay Repair

- As we service over 24,000 relays a year, it is important that our process is robust and comprehensive
- By standardising the process of relay servicing we're able to capture that all-important digital fingerprint of the end-to-end process of service
- Our skills are across a range of traditional and more modern assets, flexing to meet industry demand as new technologies emerge

Specialists in Maintenance, Repair  
and Overhaul services - we offer  
comprehensive support from our  
technical centres of excellence.
